### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Meagan Walling on 11/3/08.

2. The application has been amended as follows:

#### **Claim 1**

A method for secure message reception from a plurality of remote devices, comprising:

receiving a message at a controller;

obtaining, by the controller, a reverse channel address associated with the received message;

determining, by the controller, whether the received message is associated with at least one of the remote devices;

forwarding the message and the reverse channel address to a routing server when the message is associated with the at least one of the remote devices;

determining, by the routing server, a destination address for the received message based on the reverse channel address, where determining the destination address further comprises:

determining whether the received message is associated with a remote device that is associated with a hosted crypto server or an enterprise crypto server,

routing the received message to the hosted crypto server when the received message is associated with the remote device that is associated with the hosted crypto server, and

routing the received message to the enterprise crypto server when the received message is associated with the remote device that is associated with the enterprise crypto server; and

routing the received message to the destination address.

**Claims 6-8 are cancelled.**

**Claim 20**

An apparatus for secure message reception from a plurality of remote devices, comprising:

means for receiving a message at a controller;

~~means~~ means for obtaining, by the controller, a reverse channel address associated with the received message;

means for determining, by the controller, whether the received message is associated with at least one of the remote devices;

means for forwarding the message and the reverse channel address to a routing server when the message is associated with the at least one of the remote devices;

means for determining, by the routing server, a destination address for the received message based on the reverse channel address, where the means for determining the destination address comprises:

means for determining whether the received message is associated with a remote device that is associated with a hosted crypto server or an enterprise crypto server,

means for routing the received message to the hosted crypto server when the received message is associated with the remote device that is associated with the hosted crypto server, and

means for routing the received message to the enterprise crypto server when the received message is associated with the remote device that is associated with the enterprise crypto server; and

means for routing the received message to the destination address.

### **Claim 23**

The apparatus of claim ~~3~~20, wherein the means for determining the destination address further comprises:

means for retrieving a remote device profile based upon the obtained reverse channel address.

**Claims 25-27 are cancelled.**

***Allowable Subject Matter***

3. This office action is in response to the communication dated 8/20/08.
4. Claims 1-5 and 20-24 are allowed.
5. The following is an examiner's statement of reasons for allowance:

The present invention is directed to secured data transmission to and from a remote device. The present invention provides the information in the reverse channel, message can be transmitted through the network without exposing critical server information such as a message's destination address, the routing server determines the destination address provides a high level of security, as a result, outsiders are unable to access or determine the data being sent between the destination entity and the remote device (Specification: 0045). Each independent claim (claims 1 and 20) identifies the uniquely distinct feature of forwarding the message and the reverse channel address to a routing server when the message is associated with the at least one of the remote devices and determining, by the routing server, a destination address for the received message based on the reverse channel address. The prior arts of record fail to anticipate or render the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Minh Dieu Nguyen whose telephone number is 571-272-3873.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Emmanuel Moise can be reached on 571-272-3865. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.
